The sequence can be inserted into the plasmid pg660 to generate plasmid FERM P-16713 for expression in e.g. E.coli. The xylanase is useful for the preparation of xylooligosaccharide from xylan and for pulp-bleaching. (Updated on 27-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1195 BP; 230 A; 457 C; 333 G; 175 T; 0

The xylan enzyme has good heat stability, high activity under acidic and neutral pH. The xylan enzyme can be used as a feed additive and can be widely used in animal feed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Heat-resisting, antiproteinase acidic-neutral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Streptomyces

Fragments of the (hemi)cellulase DNA are useful as probes and primers for detecting the expression of (hemi)cellulose mRNA in a biological sample such as a tissue. They are also useful as query sequences to identified other family members or related sequences. Anti-(hemi)cellulase antibodies are useful for qualitative or quantitative determination of a polypeptide in a biological sample. These antibodies are also useful in diagnosing organism is infected with Aspergillus. The dough prepared by using the inventive (hemi)cellulase has increased strength, elasticity, stability, reduced stickiness, improved extensibility and machinability. The prepared baked product has improved crumb structure, softness and flavour. The (hemi)cellulase has higher specificity towards the substrate, is less antigenic and produces less undesirable side
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                              418

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention describes an isolated or recombinant polypeptide (I), having 50% or more identity to 190 300-1200 residue amino acid sequences (S1), given in the specification, over a region of 100 or more residues and the polypeptide as thermostable xylanase activity. (I) is useful for dough conditioning; beverage production; as a nutritional supplement in animal feed; reducing lignin in a wood or a wood product; and for eliminating and protecting animals from a microorganism comprising xylan. The polynucleotide (II) encoding (I) is useful for amplifying nucleic acid encoding a polypeptide having a xylanase activity which involves amplification of a template nucleic acid with a primer pair capable of amplifying (II) or its subsequence. (I) is useful for treating and preventing bacterial infection and fungal infection e.g. coccidiosis. This sequence encodes xylanase protein isolated from an environmental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antibacterial; fungicide; thermostable xylanase activity; dough conditioning; beverage production; nutritional supplement; animal feed; lightn reduction; wood product; xylan; bacterial infection; fungal infection; coccidiosis; gene; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      method involves the direct screening of a cDNA library prepd. in bacteria (e.g. E. coli) transformed with DNA from a eukaryotic organism (e.g. A. niger) that produces the protein. Screening for xylanase-producing clones can be performed on agar plates containing oat spelt xylan and RBB-xylan. The method was utilised in the identification of cDNA clones (AAT63042-46) coding for A. niger cellulase, xylanase and arabinoxylan degrading enzymes (AAW14595-99). The present invention describes a culture medium obtained from the culture of a recombinant host cell that is not Actinomadura flexuosa and characteristic content of a recombinant host cell that is not Actinomadura flexuosa and content in the protein comprises an amino acid sequence from a cylanolytic fragment of the amino acid sequence in AAY24480 or AAY24481. Chalso described is an enzyme preparation derived from the culture medium. Characteristic composition can be used in a method for biobleaching, composition can be used in a method for biobleaching. Characteristic content in pulp and paper processing. The xylanases are hemicelhulases characteristic content of wood pulp, increase its drainability or decrease its water content of wood pulp, increase its drainability or decrease its water content of wood pulp, increase its drainability or decrease its water content of wood pulp, increase its drainability or decrease its water content of wood pulp, increase its drainability or decrease its water content of wood pulp, increase its drainability or decrease its water consumption of biobleaching of wood pulp reducing the caned to accidify the pulp prior to xylanase have a pH optimum and content of the content of the medical prior to xylanase the content of the consumption of bleaching chemicals reducing the formation of partially degrade the hemicellulose in wood pulp which enhances the extractability of lignins by conventional bleaching chemicals and results in lower consumption of bleaching chemicals reducing the formation of consumption of bleaching chemicals reducing the formation of services and results in lower consumption of bleaching chemicals reducing the formation of consumption of bleaching chemicals reducing the formation of services and results in the consumption of bleaching chemicals reducing the formation of consumption of bleaching chemicals reducing the formation of consumption of bleaching chemicals reducing the formation of consumptions of the consumption of bleaching chemicals reducing the fo

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DB seq length: 0

FVM was prepared from pooled RNA obtained from a 48-hour
and a 72 hour, liquid GYAM culture from strain M-3125.
Cultures were vacuum filtered and the mycelial mats were
frozen in liquid nitrogen, ground to a powder, and then
added to TRIzol Reagent (Invitrogen, Carlabad CA) at
approximately 1 g mycella per 10 ml TRIzol. The cDNA was
directionally ligated into the pBlueScript II SK(+) XR
vector (cDNA Synthesis Kit; Stratagene)."

                                                                                                                                                                                                                                                                                                                                                              /clone lib="Late Blight-Challenged Tubers"
/notes "Vector: pBluescript II SK(+) XR, Site 1: BooRI;
/notes "Vector: pBluescript II SK(+) XR, Site 1: BooRI;
Site 2: XhoI; supplier: Fathogen-challenge series. Tubers
from pathogen-free Solanum tuberosum var. Shepody, clone
1756, were inoculated with 5 ul of Phytophthora infestans
(A2-mating type), through 2 puncture wounds 3 cm apart.
The tubers were incubated 1 minute to allow inoculum
absorption. The infection area was outlined for future
collection reference. Surface slices were sampled from the
tubers at 1 day, 5 days, 7 days, 11 days and 14 days
post-infection. All samples were pooled and used for RNA
isolation and library construction. A normalized library
was constructed following a modified protocol of Bonaldo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Late Blight-Challenged Tubers Solanum tuberosum cDNA clone

Surface slices were sampled from the tubers at 1 day, 5 days, 7 days, 11 days and 14 days post-infection. All samples were pooled and used for RNA isolation and library construction. A normalized library was constructed following a modified protocol of Bonaldo et al. (1996. Genome Research 6: 791-806)."

                                                                                                                        FVI was prepared from growth on excised maize seedling roots and shoots. The roots and shoots were prepared as described above and then inoculated by dipping briefly in a suspension of 5 x 1066 conidia per ml. The inoculated roots and shoots were then incubated on moistened Whatman #1 filter paper at room temperature under sterile conditions for 4 days. Fungal mycelial was collected, frozen in liquid nitrogen, ground to a powder, and then added to TRIZOl Reagent (Invitrogen, Carlsbad CA) at approximately 1 g mycelia per 10 ml TRIZOL The cDNA was directionally ligated into the pBlueScript II SK(+) XR vector (cDNA Synthesis Kit, Stratagene)."

FVI was prepared from growth on excised maize seedling
roots and shoots. The roots and shoots were prepared as
described above and then inoculated by dipping briefly in
a suspension of 5 x 10e6 conidia per ml. The inoculated
roots and shoots were then incubated on moistened Whatman
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            #1 filter paper at room temperature under sterile conditions for 4 days. Fungal mycelial was collected, frozen in liquid nitrogen, ground to a powder, and then added to TRIzol Reagent (Invitrogen, Carlsbad CA) at approximately 1 g mycelia per 10 ml TRIzol. The CDNA was directionally ligated into the palueScript II SK(+) XR vector (cDNA Synthesis Kit, Stratagene)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1. .686

FvI was prepared from growth on excised maize seedling
roots and shoots. The roots and shoots were prepared as
described above and then inoculated by dipping briefly in
a suspension of 5 x 10e6 conidia per ml. The inoculated
roots and shoots were then incubated on moistened Whatman
#1 filter paper at room temperature under sterile
conditions for 4 days. Fungal mycelial was collected,
                                                                                                                                                                                                                                                                                                                                organism="Gibberella

/note="Vector: pBlueScript II SK(+) XR; Site 1: EcoRI;
/site 2: XhoI; anamorph: Fusarium verticillioIdes. Library
FvI was prepared from growth on excised maize seedling
roots and shoots. The roots and shoots were prepared as
described above and then inculated by dipping briefly in
a suspension of 5 x 10e6 conidia per ml. The inoculated
roots and shoots were then incubated on moistened Whatman
#1 filter paper at room temperature under sterile
conditions for 4 days. Fungal mycelial was collected,
frozen in liquid nitrogen, ground to a powder, and then
added to TRIzol Reagent (Invitrogen, Carlabad CA) at
approximately 1 gmycelia per 10 ml TRIzol. The cDNA was
directionally ligated into the pBlueScript II SK(+) XR
vector (CDNA Synthesis Kit; Stratagene)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               University

Library FYI was prepared from growth on excised maize seedling roots and shoots. The roots and shoots were prepared as described above and then inoculated by dipping briefly in a suspension of 5 x 10e6 conidia per ml. The inoculated roots and shoots were then incubated on moistened Whatman #1 filter paper at room temperature under sterile conditions for 4 days. Fungal mycelial was collected, frozen in liquid nitrogen, ground to a powder, and then added to TRIZOl Reagent (Invitrogen, Carlsbad CA) at approximately 1 g mycelia per 10 ml TRIZOl. The cDNA was directionally ligated into the pBlueScript II SK(+) XR vector (cDNA Synthesis Kit; Stratagene)."

    No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US-09-467-368-1
